

Our audit engagements assist Banks in fulfilling their audit initiatives and objectives by bringing a systematic, disciplined approach to evaluating and improving overall effectiveness through using industry best practices and auditing in accordance with FFIEC guidelines, COBIT framework, and other applicable financial institution requirements and guidelines. RLR doesn't simply assign a rating to our engagements, rather, we work through each engagement by addressing every observation and finding and offering added value through our conservative approach. We offer an approach that helps you interpret our results, we assist in making recommendations, and we advise on how best to make corrections and improvements. Our clients believe this significantly differentiates RLR's audit engagements.
